The Petersburg Generation Station is owned by Indianapolis Power & Light. During the construction of the facility, it notified as a G/TSD. After inspection the facility changed its status to generator. The Petersburg Generation Station routinely requested disposal for asbestos insulation for pipes. The Liquid Waste Removal Records show only waste oil being removed from the facility. The files show no methods of on-site disposal, waste storage or spills.

I spoke with Messrs. Terry Hogan and Dwayne Burke from IPL. They have a permitted monofill that is used for the disposal of stabilizer scrubber sludge from the emission of sulfur dioxide. The station is a small quantity generator of non-listed hazardous waste which is transported off-site. There does not appear to be a need for further action.
